ADVICE

A photograph of a fire protection control room. The room features a complex network of red pipes and valves. On the left, there are several control panels with various gauges and switches. In the center, there are two red control cabinets. On the right, there is a large, intricate assembly of red pipes and valves, possibly a fire pump or a complex distribution system. The room is dimly lit, with a few overhead lights providing illumination. The overall atmosphere is industrial and technical.

No matter what type of facility you have, we offer the highest quality installation, maintenance and advisory services in Australia.

Advisory

Walker Fire Protection delivers a unique combination of professional engineering and regulatory advice, matched to practical, industry-based experience and knowledge.

Combining our product independence and detailed understanding of code requirements, we offer you unbiased, objective, practical and accurate advice on system selection, design, maintenance and compliance issues to achieve the best fire protection solution to suit your requirements. We are continually reviewing and developing our abilities in this area and see it as central to our ability to provide "world's best practice" fire protection solutions.

Our staff are always up to date with the latest and proposed changes to Building Regulations and Fire Standards, with a detailed appreciation of the consequences for new and existing buildings.

Authoritative advice on system, regulatory and compliance issues is always just a phone call away.

Projects

We offer full design and engineering services to develop and support our efficient installation and ongoing maintenance of superior fire protection solutions.

We particularly focus on highly integrated systems that feature alarm and detection, wet and dry suppression, smoke management and occupant evacuation systems to manage fire risk and protect occupants and assets.

As an acknowledged industry leader in fire protection for mission critical sites such as data processing centres, internet switch facilities and critical storage and archive facilities, we provide not only high quality, high reliability systems for these essential locations, but also full operational documentation and operator training.

Indeed, the more critical the location, the more likely you are to need the detail and quality of a Walker Fire Protection solution. Our project management, engineering and technical capabilities deliver leading fire and life safety systems from advice, design and budgeting, through to documentation, procurement, installation and commissioning.

Service

Our ability to provide a complete Essential Safety Measures Management service can make sure that your facility complies with relevant legislation and offers a fire safe environment for everyone inside.

Innovative use of Information Technology allows us to provide excellent client service levels, with quicker response times and improved records and reporting functions.

Walker Fire Protection provides dependable and cost effective fire services maintenance and management to ensure that essential safety measures are maintained, systems are operable, records are up to date and statutory obligations are met.

To find out more about superior fire protection solutions call **03 9279 7100** or visit **www.walkerfire.com.au**

It's the people who say "it won't happen to us" that it usually happens to.

Walker Fire Protection is one of the most respected names in the Australian fire protection industry. Why? We offer a uniquely integrated combination of Project, Service and Advisory capabilities to ensure that fire protection is one of the things your business doesn't have to worry about.

Specialist Fire Protection Systems. Walker Fire Protection design and install sophisticated, world-leading fire protection systems for commercial and industrial facilities, and mission critical sites such as data centres and internet switch facilities.

Essential Safety Measures Management. With thorough and reliable inspection and testing regimes Walker Fire Protection ensure that essential safety measures are fully maintained, systems are operable, records are up to date and statutory obligations are met.

Technical and Regulatory Support. Superior and product independent technical advice from Walker Fire Protection will identify the most effective solution for your fire protection, and authoritative and practical advice on regulatory issues will support your statutory compliance.

Whole of Life. Embracing the A.G.Coombs "whole of life" philosophy, Walker Fire Protection offers life cycle contracts for design, installation and ongoing warranty and maintenance of fire protection systems providing clear quality, risk and cost benefits.

Safety is Important to us. Occupational Health and Safety is a major focus and Walker Fire Protection is fully SafetyMAP accredited. SafetyMAP is a rigorous best practice integrated safety management system subject to regular and independent auditing.

Sustainability. Fire protection systems can have a significant environmental impact, particularly with respect to water usage. Walker Fire Protection is a leader in the design of water saving systems and the application of water efficient testing regimes.
